WORK EXPERIENCE

Quality Assurance Specialist | EmergConnect

September 2025 – Present | Toronto, ON

- Performed functional, regression, and production testing across web and mobile platforms to ensure application quality and release stability and delivered concise QA reports outlining testing results.
- Wrote and executed SQL queries to validate database changes, verify backend functionality, investigate defects, and support end-to-end testing.
- Partnered with developers and product managers to identify, document, and resolve defects.
- Managed environment configurations and performed sanity checks across staging and production environments to confirm build reliability before release.

Software Quality Assurance Analyst | Ontario Ministry of Health

May 2024 – August 2025 | Toronto, ON

- Developed and executed **Salesforce** test cases and scripts in an Agile/Scrum environment.
- Collaborated with development, business analysis, and success teams to review test cases, align on sprint requirements, and assisted in validating user stories and finding corrective actions to resolve defects.
- Documented process improvements and recommendations for enhancing product testing, including transitioning from manual to automated testing.

Co-Owner | WeStudy

January 2022 – Present | Toronto, ON

- Co-founded and operated a tutoring service providing personalized instruction in English, Math, and French, improving student comprehension and academic performance by ~25%.
- Designed and developed the WeStudy tutoring platform website using HTML, CSS, and JavaScript, ensuring a responsive and accessible user experience and applied problem-solving and software development principles to iteratively improve platform usability and service delivery based on user feedback.
- Managed client relationships, scheduling, and communications, maintaining an organized weekly workflow.

EDUCATION

Bachelor of Engineering in Computer Software Engineering

Toronto Metropolitan University (Formerly Ryerson University)

September 2021 - April 2026

Toronto, ON

PROJECTS

AI-Powered NPC Behavior Modeling in Unity | Unity, C#, ML-Agents, Reinforcement Learning

- Designed a Unity-based 3D game environment featuring adaptive NPCs trained using reinforcement learning, replacing traditional scripted behaviours with dynamic, context-aware decision-making.
- Implemented intelligent agents using Unity ML-Agents with custom observation spaces, action spaces, and reward functions to support navigation, combat engagement, survival tactics, and responsive player interaction.
- Evaluated AI-driven NPC performance against scripted NPC logic through structured gameplay testing and controlled simulations, assessing realism, adaptability, learning efficiency, and in-game responsiveness. Refined agent behaviour through iterative training cycles by tuning reward parameters and policies, improving training stability, convergence speed, and decision consistency while reducing erratic or sub-optimal actions.

Moflix Telecommunication Application Project | Java, JavaFX, Scene Builder, SQL

- Led a team of 4 to design and implement a telecom application using Java and JavaFX.
- Developed core Java classes for SQL database connectivity and real-time data handling.
- Built a scalable API (100+ components), including queries, methods, and views for modularity and maintainability.

SUMMARY OF QUALIFICATIONS

- **Programming & Web:** Java, Python, SQL, C, HTML, CSS, JavaScript, JavaFX
- **Framework & Tools:** Firebase, REST APIs, Unity (ML-Agents), Linux, Jira, Confluence, Azure DevOps, GitHub
- **QA:** Agile/Scrum testing, functional, regression & production testing, test case design, defect tracking, Salesforce
